

## To Check the Firefox version number on a Macintosh:

To check the version of Firefox you are using, open Firefox. At the top-left corner of the screen, click “Firefox”, then “About Mozilla Firefox”.

A box will pop open in the center of the screen. Underneath the orange word “Firefox” you will see a version number. If this version number is greater than 1.0, then your Firefox browser is updated enough to support the PLAN site. The most recent version of Firefox at the date this document is published is 3.0.7. To update to this version, go to <http://www.getfirefox.com>, and click the green button that says “Free Download”.
